

Post Specification

Post Title:	PhD student
Post Status:	4 year contract
Funded by:	Science Foundation Ireland (US/Ireland programme)
Location:	Trinity College Dublin, School of Computer Science & Statistics
Salary:	€18,500 plus fees paid
Closing Date:	Until position filled

Open position

In recent years, quantum computing has developed at an impressive pace, with implementations already claiming quantum supremacy. Such fast development drives the requirement to exchange quantum information between quantum computers and towards end users, to enable distributed quantum computing and ubiquitous access to centralized quantum resources. However, in order for quantum communications to be implemented a large scale, it will need to make use of the ubiquitous optical fibre network that is already in place for classical telecommunications network. This work will thus focus on the development of a framework to enable coexistence of classical and quantum channels over the same fibre network infrastructure.

One PhD studentships is available for work in the **area of intelligent control planes for hybrid classical/quantum communications networks.**

The work will involve the **development of new network simulation tools and with control plane algorithms for both classical and quantum networking channels.**

The work will be carried out as part of a **joint project with University of Arizona, Harvard University and Queen's University Belfast** and will involve close collaboration with these institutions.

The applicants should have a solid background in programming and in development and/or use of network simulation tools and have interested in quantum communications and computing.

The position will be based in the CONNECT research centre at Trinity College Dublin, Ireland and will be funded for 4 years. The student will also be part of the School of Computer Science and Statistics in TCD.

The position will be under the direction of Prof. Marco Ruffini and Prof. Dan Kilper.

Qualifications

The candidate must have a Bachelor degree (Master preferred) in Electrical Engineering, Computer Engineering, Physics, Computer Science, or a related field, with a minimum mark of 2.1 (i.e. with a score higher than 60%). First class honour (mark higher than 70% is desired).

The successful candidate will join a team of highly skilled and innovative researchers in next generation wireless and optical networks.

Essential Knowledge & Experience

- Knowledge of networking both at physical layer and protocols (layer2/layer3).
- Working knowledge of python programming language and Linux operating system.
- Working knowledge of network simulations tools.
- Excellent written and oral communication skills
- The ability to work well in a group.
- Strong self motivation and willing to learn attitude.

Desirable Knowledge & Experience

- Experience with network-oriented programming.
- Interest in aspects of quantum communications and computing.
- Experience with use of software defined networks control plane and orchestration.
- Working knowledge of programming languages such as c++, java.

Post Funding

The post is funded by Science Foundation Ireland (SFI), as part of a joint project with National Science Foundation (NSF) in the US and the Department for the Economy (DfE) in Northern Ireland.

Post Location

The post will be hosted at the CONNECT (<https://connectcentre.ie/>) is Ireland's largest telecommunications research centre. The Centre carries out industry-informed research focusing on wireless and optical networks of the future with a strong emphasis on the technologies that will underpin these networks.

We pride ourselves in carrying out research that is of the highest quality and that has international impact. We also pride ourselves in being an inclusive, diverse, creative, and friendly place to work.

Trinity College Dublin

Founded in 1592, Trinity College Dublin is the oldest university in Ireland and one of the older universities of Western Europe. On today's campus, state-of-the-art libraries, laboratories and IT facilities, stand alongside historic buildings on a city-centre 47-acre campus.

Trinity College Dublin offers a unique educational experience across a range of disciplines in the arts, humanities, engineering, science, human, social and health sciences. As Ireland's premier university, the pursuit of excellence through research and scholarship is at the heart of a Trinity education. TCD has an outstanding record of publications in high-impact journals, and a track record in winning research funding which is among the best in the country.

TCD has developed significant strength in a broad range of research areas including the 18 broadly-based multi-disciplinary thematic research areas listed below.

Sustainable Environment	Next Generation Medical Devices	Identities in Transformation
Smart and Sustainable Cities	Creative Technologies – Digital Media, Arts and Entertainment	International Development
Cancer	Neuroscience	Immunology and Infection
Nanoscience	Telecommunications	Creative Arts Practice
Inclusive Society	Mathematics of Complexity	Intelligent Media and Human Communication
Ageing	International Integration	Digital Humanities

Its current flagship interdisciplinary research institutes are in areas such as biomedical science, arts and humanities, neuroscience, international integration studies, and nanostructures and nanodevices. The construction of Ireland's first purpose built nanoscience research institute, CRANN, was opened in January 2008, which houses 150 scientists, technicians and graduate students in specialised laboratory facilities.

The building also includes an innovative public venue, the Science Gallery. In 2011, it received the Shorty Award for Best Cultural Institution on Twitter globally and the Irish Web Award for Best Education and Third Level Website. These joined a list of awards that includes European Museum of the Year Award – Special Commendation 2010 and National IT award for best use of technology in education, 2009.

The recently opened Trinity Biomedical Sciences Institute (TBSI) is an unprecedented development for Biomedical Research in Ireland, both in terms of scale and ambition. It

provides a facility for TCD to continue its upward trajectory in both basic and translational research programmes, notably in the areas of Immunology, Cancer and Medical Devices.

The Library of Trinity College is the largest research library in Ireland and is an invaluable resource to scholars. In addition to purchases and donations accrued over four centuries, the College has had 200 years of legal deposit. By this right Trinity can claim a copy of every book published in Ireland the UK. The Library has over 4.25 million books, 22,000 printed periodical titles and access to 60,000 e-journals and 250,000 e-books. The Library's research resources also include internationally significant holdings in manuscripts (the most famous being the Book of Kells), early printed material and maps. Its collections and services support the College's research and teaching community of 15,000+ students and academic staff.

Trinity continues to attract intellectually strong students from Ireland and abroad. More than half of its incoming undergraduates have earned in excess of 500 out of a maximum 600 points in

the national Leaving Certificate examination. The accessibility of a Trinity education to all students of ability is also very important. Trinity College was the first university in Ireland to reserve 15% of first year undergraduate places for students from non-traditional learning groups – students with a disability, socio-economically disadvantaged students as well as mature students. The College has met its target in this respect. There is also an exciting international mix of its student body where 16% of students are from outside Ireland and 40% of these students are from outside the European Union. TCD students also have an opportunity to study abroad in other leading European universities through Trinity's partnership agreements.

Students also benefit from a scholar teacher model where they have the opportunity of being taught by world-leading experts in their field. Interdisciplinarity forms a key element in the College strategy in increasing Trinity's international standing as a research-led university.

Many of Trinity College Dublin's alumni have helped shape the history of Ireland and Western Europe. They include author, Jonathan Swift, philosopher, George Berkeley, political philosopher, Edmund Burke, wit and dramatist, Oscar Wilde, historian, William Lecky, religious scholar, James Ussher, scientists, John Joly, George Johnstone Stoney, William Rowan Hamilton and physicians, William Stokes and Denis Burkitt.

Two of Trinity College's alumni have won Nobel prizes – Ernest Walton for Physics in 1951 and Samuel Beckett for Literature in 1968. The first President of Ireland, Douglas Hyde was a graduate as was the first female President of Ireland, Mary Robinson.

Equal Opportunities Policy

Trinity College Dublin is an equal opportunities employer and is committed to the employment policies, procedures and practices which do not discriminate on grounds such as gender, civil status, family status, age, disability, race, religious belief, sexual orientation or membership of the travelling community.

Application Procedure

Candidates should submit a cover letter together with a full curriculum vitae to include the names and contact details of 3 referees (email addresses if possible) to marco.ruffini@tcd.ie
